The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (LGL). A laboratory grown diamond is one that has assentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). This is a manufactured (mammade) diamond produced by CVD (chemical vopor deposition) or by HPHI (high pressure high temperature) growth processes and may include post-growth treatments to after the color. IGL employs and utilizes those techniques and equipment currently available to IGL, including, without limitation, 10X magnification, carrected triplet loupe, bincular microscope, matter color comparison stones, and movi include post-groups device.
