CLARITY CHARACTERISTICS

KEY TO SYMBOLS

Red symbols indicate internal characteristics. Green symbols indicate external characteristics.

The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined alamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or by HPHI (high pressure high temperature) growth processes and may include post-growth treatments to after the color. I.G.I. employs and utilize those techniques and equipment currently available to I.G.I. Including, without limitation, 10X magnification, corrected trighel lauge, bincular microscope, master color comparison stomes, non-contact-optical measuring device. Spectraphotometer and such other instruments and/or processes as deemed appropriate by IGJ. In the case where diamond moles is set in a mounting, a random testing proceadure, tegrarding the diamonds being of natural or laboratory created origin will be performed. This Report includes advanced security features A duly accredited gemologist or jeweight can advanced usect to the implantance and interrelationship between cut, color, clarity and carat weight.
