CLARITY CHARACTERISTICS

KEY TO SYMBOLS

Red symbols indicate internal characteristics. Green symbols indicate external characteristics.

The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and oplical properties as a mined alamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth treatments to after the color. I.G.I. employs and utilizes those techniques and equipment currently available to I.G.I. including, without limitation, 10X magnification, corrected trighet lauge, bincular microscope, matter color comparison stomes, non-contact-optical measuring device, Spectraphotometer and such other instruments and/or processes a deemed appropriate by IGJ. In the case where diamond molee is set in a mounting, a random testing proceadure, regarding the diamond being of natural or laboratory created origin will be performed. This Report includes advanced security features A duly accredited gemologist or jeweight can advanced yeaculty the time and intervientionship between cut, color, clarity and carat weight.
